

# MetManager™

Marine weather information and routing advice service

Using the same system already fitted on many commercial ships for the receipt of critical chart correction information, the ChartCo MetManager service provides ships' masters and navigating officers with comprehensive weather information and computer based onboard vessel routing advice.

Weather data is derived from US Government sources and is broadcast daily by ChartCo. Forecast data is automatically received onboard the ship without the need for initiation by ships' crews. All ships receive large format full ocean region coverage.

## MetManager™ Service Features:

- Utilises ChartCo's low cost data channel so no additional communication costs.
  - High quality forecast from US Government sources.
  - Analysis plus 4 or 9 day forecasts received automatically onboard the vessel.
  - Global weather data from 70° North to 70° South.
  - Route planning facilities with suggested route and route comparison functions.
  - Comprehensive, fast and easy to use.
  - No special computer skills are required.
